

Guidance document for processing PM-JAY packages

Broad Ligament Haematoma

Procedures covered: 1

Specialty: Obstetrics & Gynecology

Package name	Procedure name	HBP 1.0 code	HBP 2.0 code	Package price (INR)
Laparotomy for broad ligament haematoma	Laparotomy for broad ligament haematoma	S400051, S400059	SO005A	16,000

ALOS: 3-5 days

Minimum qualification of the treating doctor:

Essential: MS/MD/DNB/DGO/Equivalent (in Obstetrics & Gynecology)

Special empanelment criteria/linkage to empanelment module: Facilities with well-equipped operation theatre for laparotomy

Disclaimer:

For monitoring and administering the claim management process of Laparotomy for **Broad Ligament Haematoma**, NHA shall be following these guidelines. This document has been prepared for guidance of PROCESSING TEAM and TRANSACTION MANAGEMENT SYSTEM of AB PM-JAY for the claims of procedures mentioned above. The hospitals can also refer to this document so that they have the insight on how the claims will be processed. However, this document doesn't provide any guidance on clinical and therapeutic management of patient. In that respect the hospitals and physicians may refer to any other relevant material as per the extant professional norms.

PART I: GUIDELINES FOR CLINICIANS AND HEALTHCARE PROVIDERS

1.1 Objective:

The purpose of this section is to act as a guidance & a clinical decision support tool for the clinicians in deciding the line of treatment, plan clinical management of patient and decide referral of cases to the appropriate level of care (as required) for treatment of patients under PMJAY and selection of corresponding Health Benefit Package.

It will also serve as a tool for hospitals to determine and submit the mandatory documents required for claiming reimbursement of health benefit package under PMJAY.

1.2 Clinical key pointers:

Broad ligament hematoma is an unusual complication that can occur during delivery, just after delivery or later in the puerperium. Rapid labor, cesarean section, instrumental deliveries, and trauma have been suggested as predisposing factors.

Difficult/instrumental vaginal delivery followed by one or all the symptoms below:

- Unexplained shock
- Intense pain abdomen (Persistent, intense, spontaneous contractions)

- Excessive vaginal bleeding
- Inability to void after delivery

Management

- Course of management is decided on the **general condition of the woman, size of haematoma, associated tissue injury**
- Laparotomy is the preferred mode of surgical management

1.3 Mandatory documents- For healthcare providers

Following documents should be uploaded by the concerned hospital staff at the time of pre-authorization and claims submission:

Mandatory document	Laparotomy for Broad Ligament Haematoma
i. At the time of Pre-authorization	
Detailed clinical notes including history, symptoms, signs, examination findings, planned line of treatment, and admission advice	Yes
Detailed delivery notes	Yes
USG Abdomen/pelvis	Yes
Complete blood count (CBC)	Yes
Optional Coagulation profile	Yes
ii. At the time of claim submission	
Detailed indoor case papers (ICPs)	Yes
USG abdomen/pelvis (optional)	Yes
Detailed operative/ procedure notes	Yes
Blood transfusion notes (if applicable)	Yes
Detailed Discharge Summary	Yes

PART II: GUIDELINES FOR PROCESSING TEAM

PART III: GUIDELINES FOR TRANSACTION MANAGEMENT SYSTEM (TMS)

3.1 Objective: To enable setting up of cross check mechanisms/rule engines within the IT platform (TMS) to ensure compliance with STGs and to prevent fraud / abuse of the Health Benefit Package.

3.2 Below mentioned are the scenarios where a provision would be built in TMS for pop-ups:

- Was clinical history, findings, and imaging suggestive of broad ligament haematoma? Yes
- Was clinical examination and imaging indicative of surgery? Yes

Till the time the functionality is being developed, the processing doctors shall check the above manually.
